

Lucas Selani

Senior Software Engineer — LLM Agents & AI Automation · Mobile & Backend

Belo Horizonte, Brazil · Remote (US, Brazil and Europe time zones) · Full-time or contractor

selani.lucas@gmail.com · +55 35 99834-6484 · linkedin.com/in/lucasselani · github.com/lucasselani

SUMMARY

Senior Software Engineer with 9+ years of production experience in fintech (10M+ users) and digital identity (200k+ active users), now building LLM agent pipelines. Built Darkrunner, a TypeScript multi-agent system that produced and published full YouTube videos with no human input, and runs an AI content operation on Claude Code. Brings production engineering to AI work: Rust, Java and Go microservices on AWS, Flutter and Android apps, CI/CD and observability.

SKILLS

- **AI:** LLM agents, multi-agent orchestration, Claude Code, Ollama, ComfyUI, Gemini, text-to-speech, AI video generation (Veo 3), prompt engineering
- **Languages:** TypeScript, Node.js, Rust, Java, Go, Dart, Kotlin, JavaScript
- **Automation:** Playwright, Remotion, FFmpeg, YouTube API
- **Backend & Cloud:** Microservices, REST APIs, PostgreSQL, Redis, AWS, GCP, Docker, Kubernetes, Terraform, CI/CD (GitHub Actions)
- **Mobile & Web:** Flutter, Android, React, Server-Driven UI (SDUI)

AI PROJECTS

Darkrunner — multi-agent video pipeline (TypeScript/Node.js, private)

- Designed a **TypeScript/Node.js** monorepo where **LLM agents** handle scripting, planning and QA. Given only a channel name, it loaded that channel's settings and produced a full podcast-style video (script, voice-over, images, effects, subtitles) and uploaded it to YouTube.
- Rendered video programmatically with **Remotion**, generated images and audio locally with **Ollama** and **ComfyUI**, and added a second flow that generated **Veo 3** clips through **Playwright** browser automation.
- Ran up to **15 videos a day across 5 channels**, producing a few hundred videos in total.

EXPERIENCE

Senior Software Engineer — Independent | Jul 2026 – Present

- Running an AI-driven YouTube content operation built on **Claude Code**: agent jobs, scripts and documentation that research niches, write scripts, generate narration and video assets, and package each upload.

Senior Mobile Engineer — Will Bank | Nov 2024 – Jul 2026

Fintech with 10M+ users · Fraud Prevention · Remote · Engineering department closed in Jul 2026.

- Developed and maintained 4 backend microservices (**Rust, Java, JavaScript**) on **AWS** with **PostgreSQL** for the security challenge flow, called on **every Pix transaction**; migrated the legacy Java card password service to Rust as the sole engineer on it.
- Built a **Server-Driven UI (SDUI)** system where the Flutter app only renders screens sent by the backend, turning a **two-week release cycle** into an **instant backend change** behind a feature flag.
- Wrote RFCs and ADRs for the migration, the move to SDUI and a refactor that added events and logs to the fraud prevention package.

Senior Software Developer — Unico IDtech | Jun 2020 – Nov 2024

Brazil's leader in digital identity · Remote · Joined as Software Developer, promoted to Senior (IC5) in 2022.

- Architected and scaled a multi-module **Flutter super-app** serving **200k+ active users**, with facial biometrics and digital documents, its Core Module, Design System and CI/CD release train.
- In the final year, worked 6 months as a backend engineer in **Go** and 6 months on **React** web.

Android Developer — Toodoo | Jan 2019 – Jun 2020

- Built native Android features for client apps (Natura, Burger King) and an app from scratch for Wooza.

Software Developer & QA — Inatel Competence Center (ICC) | Jul 2014 – Jan 2019

- Native Android apps (2 years), backend features in JavaScript for an Ericsson telecom project, and 3 years of QA.

EDUCATION

BSc in Computer Engineering — Inatel (National Institute of Telecommunications) | 2014 – 2018

CERTIFICATIONS

Architecting with Google Compute Engine — Google Cloud | Mar 2022
