

Lucas Selani

Senior Software Engineer — Fullstack & Mobile · Rust, Java, Go, React, Flutter · AWS/GCP

Belo Horizonte, Brazil · Remote (US, Brazil and Europe time zones) · Full-time or contractor

selani.lucas@gmail.com · +55 35 99834-6484 · linkedin.com/in/lucasselani · github.com/lucasselani

SUMMARY

Senior Software Engineer with 9+ years building products end to end in fintech (10M+ users) and digital identity (200k+ active users). Writes backend services in Rust, Java and Go on AWS with PostgreSQL, and the mobile and web clients that use them in Flutter, native Android and React. At Will Bank, built a full-stack Server-Driven UI (SDUI) system that turned a two-week release cycle into an instant backend change, and migrated a legacy Java service to Rust.

SKILLS

- **Backend:** Rust, Java, Go, Node.js/JavaScript, TypeScript, REST APIs, Microservices, PostgreSQL, Redis
- **Cloud & DevOps:** AWS, GCP, Docker, Kubernetes, Terraform, CI/CD (GitHub Actions), Trunk-Based Development, Feature Flags
- **Mobile & Web:** Flutter, Dart, Android (Kotlin, Java), iOS via Flutter, React, BLoC, Firebase
- **Architecture:** Server-Driven UI (SDUI), Microservices, Clean Architecture, Modular Architecture, Design Systems, RFCs and ADRs
- **AI:** LLM agents, Claude Code, Ollama, ComfyUI, Remotion, Playwright

EXPERIENCE

Senior Software Engineer — Independent | Jul 2026 – Present

- Building AI automation projects: an agent-driven YouTube content operation that uses Claude Code jobs, scripts and documentation for niche research, scripting, narration and video generation.

Senior Mobile Engineer — Will Bank | Nov 2024 – Jul 2026

Fintech with 10M+ users · Fraud Prevention · Remote · Engineering department closed in Jul 2026.

- Developed and maintained 4 backend microservices (**Rust, Java, JavaScript**) on **AWS** with **PostgreSQL** for the security challenge flow, which is called on **every Pix transaction**: the app sends the flow (Pix, card and others) and the backend decides which challenge to show.
- Built a full-stack **Server-Driven UI (SDUI)** system on top of it: the backend returns the screens and the **Flutter** app only renders them, so changes to the card password screens went from a **two-week release cycle** (code freeze, beta, store rollout) to an **instant backend change** behind a feature flag.
- Migrated the legacy Java card password service to Rust as the sole engineer on it, and moved its screens to SDUI.
- Wrote RFCs and ADRs for the service migration, the app's move to SDUI and a refactor of the fraud prevention package that added events and logs to a buggy, unobservable codebase.
- Stack: Rust, Java, JavaScript, AWS, PostgreSQL, Flutter, Dart, Server-Driven UI, Feature Flags.

Senior Software Developer — Unico IDtech | Jun 2020 – Nov 2024

Brazil's leader in digital identity · Remote · Joined as Software Developer, promoted to Senior (IC5) in 2022.

- Moved into fullstack work in the final year: 6 months as a backend engineer in **Go** (after contributing to the Go BFF) and 6 months on **React** web.
- Architected and scaled a multi-module **Flutter super-app** serving **200k+ active users**, with facial biometrics and digital documents.
- Split the app into feature packages owned by each team through **CODEOWNERS**, which cut build times and merge conflicts, kept reviews with the owning team and let each module run on its own.
- Designed the **Core Module** and the **Design System** used by every module of the super-app, and built **CI/CD** for the trunk-based monorepo with a weekly release train.
- Stack: Go, React, Flutter, Dart, Monorepo, GitHub Actions.

Android Developer — Toodoo | Jan 2019 – Jun 2020

São Paulo, Brazil · Agency projects.

- Built native **Android** features for client apps, including a digital banking module for **Natura** and geofenced promotions for **Burger King**, and an app from scratch for **Wooza** (carrier portability).

Software Developer & QA — Inatel Competence Center (ICC) | Jul 2014 – Jan 2019

Minas Gerais, Brazil.

- Developed backend features in JavaScript on a proprietary platform for a large **Ericsson** telecom project with 400+ people, and native **Android** apps for 2 years.
- Started in QA (3 years) with security, performance and usability testing.

PROJECTS

Darkrunner — automated video pipeline (TypeScript/Node.js, private)

- TypeScript monorepo where LLM agents handle scripting, planning and QA: given only a channel name, it produced a full video (script, voice-over, images, effects, subtitles) and uploaded it to YouTube, up to 15 videos a day across 5 channels. Built with Remotion, Playwright, Ollama and ComfyUI.

EDUCATION

BSc in Computer Engineering — Inatel (National Institute of Telecommunications) | 2014 – 2018

CERTIFICATIONS

Architecting with Google Compute Engine — Google Cloud | Mar 2022

LANGUAGES

Portuguese (Native) · English (Full professional; EF SET 71/100, C2)
